## 1.0 EXECUTIVE SUMMARY

Setsco Services Ptd Ltd was engaged by DHI Water & Environment (S) Pte Ltd to conduct an ambient air quality monitoring at Woodlands various sites (5 locations) from 20 January 2023 to 10 February 2023.

This report presents the data collected during the period of study. The phase of the study included real-time monitoring of Particulate Matter (PM<sub>10</sub> and PM<sub>2.5</sub>), Nitrogen Dioxide (NO<sub>2</sub>), Carbon Monoxide (CO).

The result was found in Page 7.

## 2.0 OBJECTIVES

- To determine the level of compliance by comparing the data collected with the World Health Organization Air Quality Guidelines (WHO-AQG), United States Environment Protection Agency National Ambient Air Quality Standard (USEPA-NAAQS) or European Commission: Air Quality Standard.

### 3.0 SCOPE OF WORK

The locations selected for ambient air monitoring and type of parameter monitored in this study is listed in the table below:

Table 3.1: Test location, parameters and monitoring period

<b>Location</b>	<b>Test Parameters</b>	<b>Date of Monitoring</b>
A1 (Admiralty Road West and Keramat Road)		20 January 2023 to 27 January 2023
A2 (19 Woodlands Ave 9, Republic Poly Xperiential Hub)	Particulate Matter (PM <sub>10</sub> )	27 January 2023 to 03 February 2023
A3 (Blk 877 Woodlands Ave 9)	Particulate Matter (PM <sub>2.5</sub> ) Nitrogen Dioxide (NO <sub>2</sub> ) Carbon Monoxide (CO)	20 January 2023 to 27 January 2023
A4 (Outside Micron)		27 January 2023 to 03 February 2023
A5 (Woodlands Ind Park E2)		03 February 2023 to 10 February 2023

#### 4.0 AMBIENT AIR MONITORING EQUIPMENT AND ANALYSIS METHOD

Real-time analysers were deployed to monitor the levels of the respective pollutants.

Table 4.1: Equipment and Analysis Method

Parameters	Equipment / Analysis Method	Units
Particulate Matter (PM <sub>10</sub> )		µg/m <sup>3</sup>
Particulate Matter (PM <sub>2.5</sub> )	MT-2005 Customised Outdoor Air Quality Monitoring Station (Non-USEPA)	µg/m <sup>3</sup>
Nitrogen Dioxide (NO <sub>2</sub> )		µg/m <sup>3</sup>
Carbon Monoxide (CO)		mg/m <sup>3</sup>

Note:

- 1) "mg/m<sup>3</sup>" denotes "milligrams per cubic meter"
- 2) "µg/m<sup>3</sup>" denotes "micrograms per cubic meter"
- 3) Detection Limit for PM<sub>10</sub> and PM<sub>2.5</sub> is 1ug/m<sup>3</sup>, and 0.01ppm for CO and NO<sub>2</sub>, corresponding to 1.15mg/m<sup>3</sup> and 18.8ug/m<sup>3</sup> respectively.

## 5.0 AMBIENT AIR QUALITY STANDARDS

The following table summarizes the Singapore Ambient Air Quality Targets for Particulate Matter as adopted by the National Environment Agency (NEA). The standard was based mainly on WHO Interim Targets and Long Term Targets (Final) and aligned with Sustainable Singapore Blueprint Target [2009] (SSBT) following the recommendation of the Advisory Committee on Ambient Air Quality formed on 2010.

Table 5.1: Singapore Ambient Air Quality Targets

Pollutants	Singapore Targets by 2020	Long Term Targets
Particulate Matter PM <sub>10</sub>	<b>24-hour mean: 50 µg/m<sup>3</sup></b> Annual mean: 20 µg/m <sup>3</sup> <i>(WHO Final)</i>	
Particulate Matter PM <sub>2.5</sub>	<b>24-hour mean: 37.5 µg/m<sup>3</sup></b> <i>(WHO Interim Target)</i> <hr/> Annual mean: 12 µg/m <sup>3</sup> <i>(SSBT)</i>	<b>24-hour mean: 25 µg/m<sup>3</sup></b> <i>(WHO Final)</i> Annual mean: 10 µg/m <sup>3</sup> <i>(SSBT)</i>
Nitrogen Dioxide, NO <sub>2</sub>	<b>1-hour mean: 200 µg/m<sup>3</sup></b> Annual mean: 40 µg/m <sup>3</sup> <i>(WHO Final)</i>	
Carbon Monoxide, CO	<b>8-hour mean: 10 mg/m<sup>3</sup></b> 1-hour mean: 30 mg/m <sup>3</sup> <i>(WHO Final)</i>

# 1. Introduction

Arup has been engaged by DHI to conduct environmental noise and vibration impact assessment for the proposed Woodlands North Coast (WNC) Stage 1 development. This report presents the findings of the baseline noise measurements surrounding the project site. The noise and vibration impact assessment will be provided in subsequent stage.

## 1.1 Project Description

The proposed development for Woodlands North Coast (WNC) Stage 1 includes land preparation works to construct new industrial buildings and estates with basements and ancillary services such as roads, drain and sewers and utilities.

Following the completion of 1 and 7 North Coast, WNC will continue to develop progressively in different phasing bringing mixed use development comprising of industrial developments, infrastructure and transport facilities and commercial development. The master planning for WNC Stage 1 is shown in Figure 1.

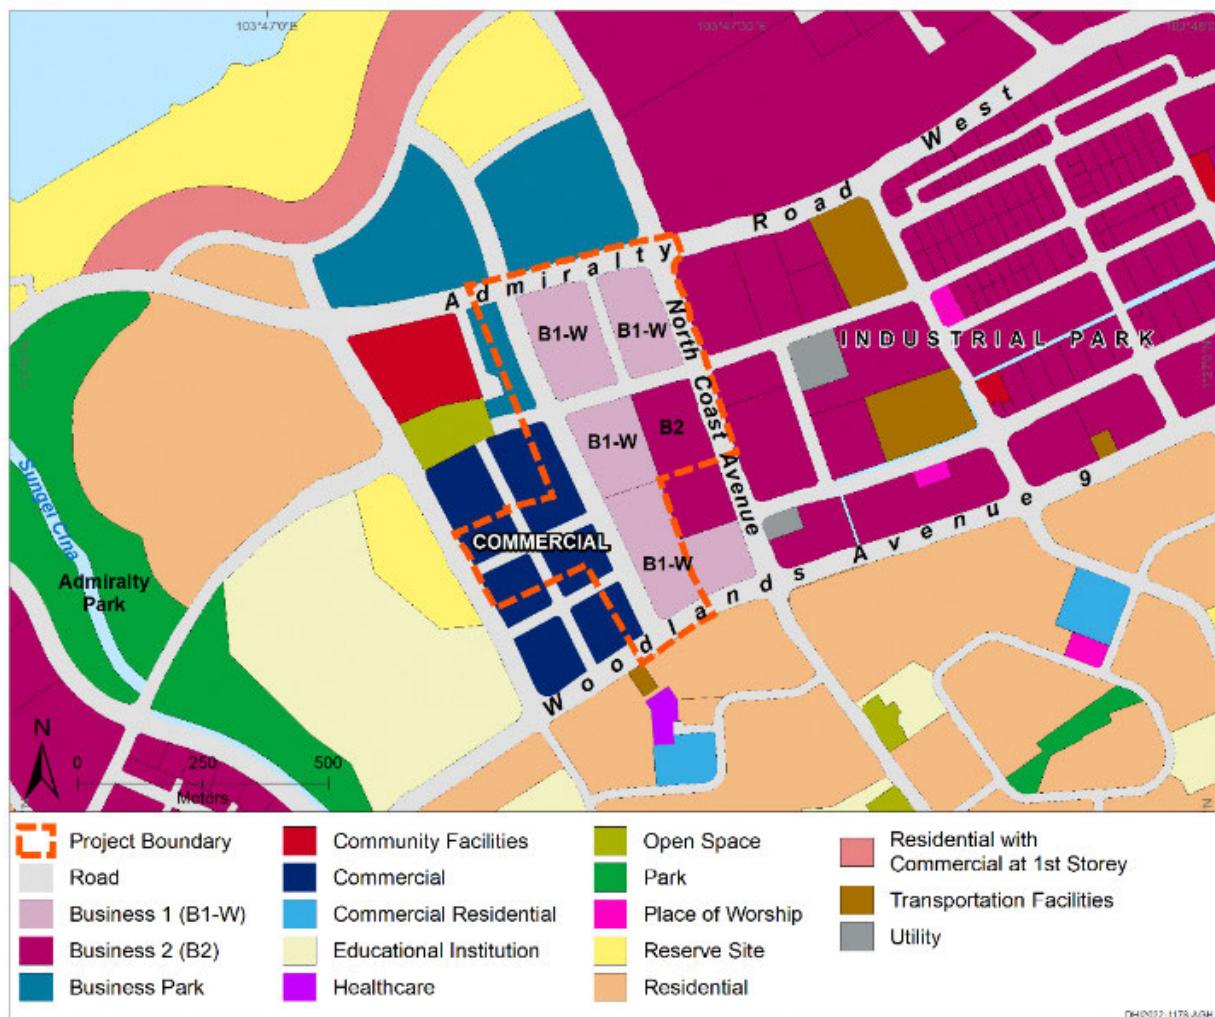

Figure 1 Master planning for WNC Stage 1 area

## 1.2 Project Site

WNC precinct is located in the northern region of Singapore within the northern tip of Woodlands Planning Area. The project site (WNC Stage 1) is bounded by Woodlands Avenue 9, North Coast Avenue and Admiralty Road West. It is also illustrated in Figure 2.

Figure 2 Project location and land uses in vicinity

## 1.3 Noise Sensitive Receivers

The project site is surrounded by the following noise sensitive receivers. It is also illustrated in Figure 3.

- Residential (to the south of the project site)
- Republic Polytechnic (to the west of the project site)
- Industrial Park (to the east of the project site)
- Admiralty forest, boarding house and residents (to the north of the project site)

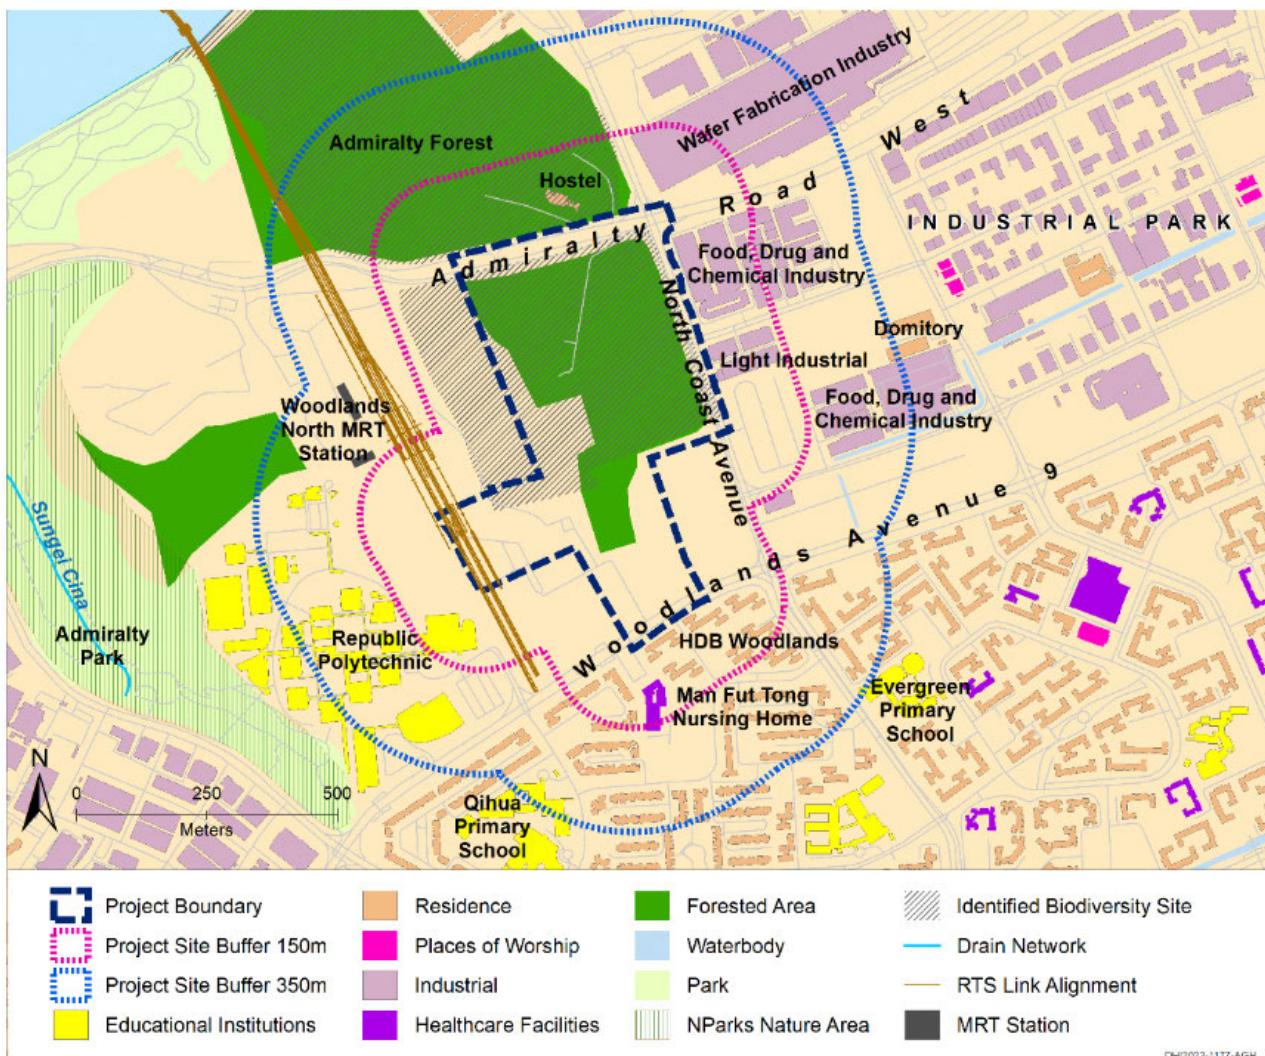

Figure 3 Overview of sensitive receivers

## 2. Construction Noise Limits

The noise assessment criteria are based on the Singapore Construction Noise Regulations. The permissible construction noise limits for worksites from Monday to Saturday is shown in Table 1 below.

Types of affected buildings	Worksite Operational Period			Parameter
	Day (7 am – 7 pm)	Evening (7 pm – 10 pm)	Night (10 pm – 7 am)	
(a) Hospitals, schools, institutions of higher learning, homes for the aged sick etc.	60	50		$L_{eq-12hr}$ , dB(A)
	75	55	55	$L_{eq-5 min}$ , dB(A)
(b) Residential buildings located less than 150 m from the construction site where the noise is being emitted	75	-	-	$L_{eq-12hr}$ , dB(A)
	-	65	55	$L_{eq-1hr}$ , dB(A)
	90	70	55	$L_{eq-5 min}$ , dB(A) <sup>(1)</sup>
	75	55	55	$L_{eq-5 min}$ , dB(A) <sup>(2)</sup>
(c) Building (other than those in paragraphs (a) and (b))	75	65		$L_{eq-12hr}$ , dB(A)
	90	70	70	$L_{eq-5 min}$ , dB(A)

Notes:

<sup>(1)</sup> Applicable maximum permissible noise levels where noise is being emitted on Mondays to Saturdays.

<sup>(2)</sup> Applicable maximum permissible noise levels where noise is being emitted on Sundays and public holidays.

**Table 1 Permissible construction noise limits for worksites - Source: Environmental Protection and Management (Control of Noise at Construction Sites) Regulations, 2011**

According to NEA's directive, the maximum permissible noise levels for construction sites shall be adjusted by the addition of a correction factor to the higher of either the permissible noise level or the measured background noise level, to account for the existing background noise levels in the area. The correction factors correspond to the difference between the applicable permissible level, and the background noise level, and are presented in Table 2.

It should be noted that the correction factor is not to be used during the design and prediction phase. Instead, the intent of the correction factor is for use during assessment to account for background ambient noise levels.

Difference between Permissible and Background Noise Levels dB(A)	Correction Factor dB(A)
Below 2	3
2 to less than 4	2
4 to less than 10	1
10 and above	0

**Table 2 Correction factor - Source: Environmental Protection and Management (Control of Noise at Construction Sites) Regulations, 2011**

### 3. Baseline Noise Measurements

Arup conducted baseline noise monitoring between 17<sup>th</sup> and 27<sup>th</sup> January 2023 to determine the existing noise environment. The baseline noise monitoring locations surrounding the project site is shown in Figure 4. These locations were selected to represent receptors located in close proximity to the anticipated worksites.

A 15-minutes attended noise measurements were carried out at the noise monitoring locations shown in Figure 4 to understand the noise environment around the noise sensitive receivers identified in Section 1.3.

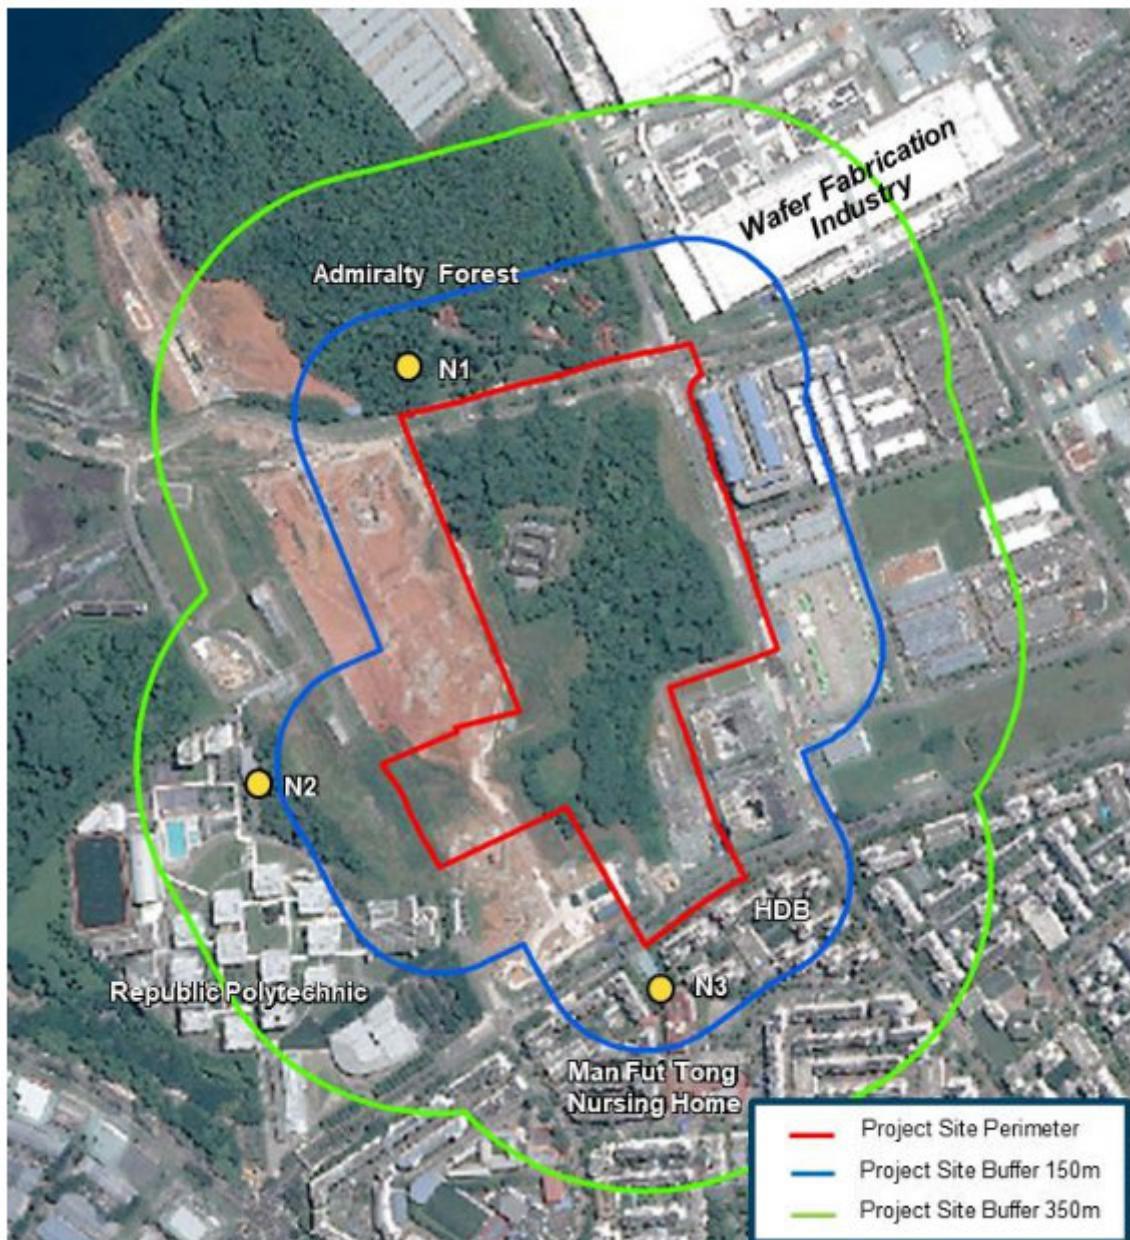

Figure 4 Noise Monitoring Locations

### 3.1 Instruments

The following equipment is used to the noise measurements:

- NTi XL2 Noise Analyzer: A2A-14737-E0
- NTi XL2 Noise Analyzer: A2A-14223-E0
- NTi XL2 Noise Analyzer: A2A-14763-E0
- Brüel & Kjaer Type 2270: 3011356

Calibration certificates for the above equipment can be located at Appendix A below.

The instruments were calibrated using a calibrator immediately before and after each monitoring location and showed minor drift of less than 0.5dB.

### 3.2 Baseline Noise Monitoring

The noise loggers were set up at 1.5m above the ground and away from a façade or any reflective surface. The baseline noise monitoring locations were also selected away from local noise sources such as mechanical plant, pumps or regular community activity.

The noise measurements were carried using NEA approved Type 1 sound level meters. Data recorded during periods of rain can increase the measured noise levels and therefore not representative of the noise sources of interest. As such, extraneous noise from the rain has been excluded from our assessment.

The parameter used in the noise monitoring were the following:

- $L_{Aeq,5min}$  is the equivalent continuous sound pressure level over a 5-minute measurement period
- $L_{Aeq,1hr}$  is the equivalent continuous sound pressure level over a 1-hour measurement period
- $L_{Aeq,12hr}$  is the equivalent continuous sound pressure level over a 12-hour measurement period;

A summary of the measurement results is presented in Table 3. The detailed noise results for the monitoring period are presented in Appendix B.

Location	Worksite Operational Hours		
	Day (07:00 – 19:00)	Evening (19:00 – 22:00)	Night (22:00 – 07:00)
N1 (Admiralty Forest)	$L_{Aeq,12hr}$ 62 dB		$L_{Aeq,12hr}$ 60 dB
	$L_{Aeq,5min}$ 61 dB	$L_{Aeq,1hr}$ 60 dB	$L_{Aeq,1hr}$ 59 dB
		$L_{Aeq,5min}$ 60 dB	$L_{Aeq,5min}$ 59 dB
N2 (Republic Polytechnic)	$L_{Aeq,12hr}$ 55 dB		$L_{Aeq,12hr}$ 53 dB
	$L_{Aeq,5min}$ 54 dB	$L_{Aeq,1hr}$ 54 dB	$L_{Aeq,1hr}$ 52 dB
		$L_{Aeq,5min}$ 53 dB	$L_{Aeq,5min}$ 52 dB
N3 (877 Woodlands Avenue 9)	$L_{Aeq,12hr}$ 65 dB		$L_{Aeq,12hr}$ 62 dB
	$L_{Aeq,5min}$ 64 dB	$L_{Aeq,1hr}$ 64 dB	$L_{Aeq,1hr}$ 60 dB
		$L_{Aeq,5min}$ 63 dB	$L_{Aeq,5min}$ 60 dB

**Table 3 Summary of baseline noise measurements**

Note: Noise results taken on 23 and 24 January 2023 were not used as it is not representative to typical noise environment (i.e. public holidays)

A 15-minutes attended noise measurements were carried out on 27<sup>th</sup> January 2023 at the noise monitoring locations to understand the noise environment at the sensitive receivers. The noise results and the description of the noise environment during the measurement are shown in Table 4.

<b>Rec ID</b>	<b>L<sub>Aeq,15mins</sub></b>	<b>Time</b>	<b>Description</b>
N1	59	10:23	The overall noise environment at this monitoring location during the attended measurement period was dominated by frequent traffic from Admiralty Road West and insects. Construction noise from the TE1 was audible at this location but not dominating the noise environment.
N2	60	11:24	The overall noise environment at this monitoring location during the attended measurement period was dominated by local activities such as people talking, vehicles movement to carpark
N3	63	12:06	The overall noise environment at this monitoring location during the attended measurement period was dominated by frequent traffic noise from Woodlands Avenue 9. On some occasions, kids noise were audible.

**Table 4 Attended noise measurements**

## Introduction

SETSCO SERVICES PTE LTD was appointed by DHI WATER & ENVIRONMENT (S) PTE LTD to carry out Ground Vibration Monitoring at **HDB Block 877, Woodlands Avenue 9, Singapore 730877.**

## Project

Environmental Baseline Survey

## Scope of Measurement

In this monitoring the evaluation of ground vibration is based on the maximum values of the three components of the vibration velocity that is Vertical, Longitudinal and Transverse direction {V (z-axis), L (x-axis) and T (y-axis)}.

The measurement in this three directions would be monitored at location specified in the 'Date of Measurement and Test Locations' section.

The measurement would be in frequency range of 1Hz to 100Hz, velocity-time domain with a minimum trigger level set at **0.3 mm/s**. The monitoring of vibration was conducted based on client's request. The dominant frequency with the corresponding peak particle velocity would be tabulated. The vibration meter was set on continuous and histogram monitoring with readings taken every 5 seconds interval.

## Objective of Measurement

The objective of this monitoring at **HDB Block 877, Woodlands Avenue 9, Singapore 730877** was to determine the level of the vibration for the purpose of environmental baseline survey.

## Measurement Equipment Specification

The measurement equipment for the vibration test measurements are as follows:

- INSTANTEL INC Ground Vibration Monitoring Equipment (Vibration Sensor Tri-axial)

Calibration Certification of the equipment/s is provided in 'Appendix 1- Calibration Certificates' section.

## Date of Measurement and Test Locations

The measurements were conducted from 6<sup>th</sup> January 2023 to 8<sup>th</sup> January 2023 at the grass patch in front of **HDB Block 877, Woodlands Avenue 9, Singapore 730877**.

Figure 1: Test Location & Direction of Measurement

## Results & Conclusion

For the results of the measurement, refer to the 'Vibration Measurement Data' section.

The details of the measurement show the frequency with the corresponding peak particle velocity in Vertical, Longitudinal and Transverse direction.

## Introduction

SETSCO SERVICES PTE LTD was appointed by DHI WATER & ENVIRONMENT (S) PTE LTD to carry out Ground Vibration Monitoring at **Micron Semiconductor Asia Pte Ltd, 1 North Coast Drive, Singapore 757432**.

## Project

Environmental Baseline Survey

## Scope of Measurement

In this monitoring the evaluation of ground vibration is based on the maximum values of the three components of the vibration velocity that is Vertical, Longitudinal and Transverse direction {V (z-axis), L (x-axis) and T (y-axis)}.

The measurement in this three directions would be monitored at location specified in the 'Date of Measurement and Test Locations' section.

The measurement would be in frequency range of 1Hz to 100Hz, velocity-time domain with a minimum trigger level set at **0.3 mm/s**. The monitoring of vibration was conducted based on client's request. The dominant frequency with the corresponding peak particle velocity would be tabulated. The vibration meter was set on continuous and histogram monitoring with readings taken every 5 seconds interval.

## Objective of Measurement

The objective of this monitoring at **Micron Semiconductor Asia Pte Ltd, 1 North Coast Drive, Singapore 757432** was to determine the level of the vibration for the purpose of environmental baseline survey.

## Measurement Equipment Specification

The measurement equipment for the vibration test measurements are as follows:

- INSTANTEL INC Ground Vibration Monitoring Equipment (Vibration Sensor Tri-axial)

Calibration Certification of the equipment/s is provided in 'Appendix 1- Calibration Certificates' section.

## Date of Measurement and Test Locations

The measurements were conducted from 13<sup>th</sup> January 2023 to 15<sup>th</sup> January 2023 at the grass patch outside the boundary of **Micron Semiconductor Asia Pte Ltd, 1 North Coast Drive, Singapore 757432**.

Figure 1: Test Location & Direction of Measurement

## Results & Conclusion

For the results of the measurement, refer to the 'Vibration Measurement Data' section.

The details of the measurement show the frequency with the corresponding peak particle velocity in Vertical, Longitudinal and Transverse direction.

## Introduction

SETSCO SERVICES PTE LTD was appointed by DHI WATER & ENVIRONMENT (S) PTE LTD to carry out Ground Vibration Monitoring at **Admiralty Forest**.

## Project

Environmental Baseline Survey

## Scope of Measurement

In this monitoring the evaluation of ground vibration is based on the maximum values of the three components of the vibration velocity that is Vertical, Longitudinal and Transverse direction {V (z-axis), L (x-axis) and T (y-axis)}.

The measurement in this three directions would be monitored at location specified in the 'Date of Measurement and Test Locations' section.

The measurement would be in frequency range of 1Hz to 100Hz, velocity-time domain with a minimum trigger level set at **0.3 mm/s**. The monitoring of vibration was conducted based on client's request. The dominant frequency with the corresponding peak particle velocity would be tabulated. The vibration meter was set on continuous and histogram monitoring with readings taken every 5 seconds interval.

## Objective of Measurement

The objective of this monitoring at **Admiralty Forest** was to determine the level of the vibration for the purpose of environmental baseline survey.

## Measurement Equipment Specification

The measurement equipment for the vibration test measurements are as follows:

- INSTANTEL INC Ground Vibration Monitoring Equipment (Vibration Sensor Tri-axial)

Calibration Certification of the equipment/s is provided in 'Appendix 1- Calibration Certificates' section.

## Date of Measurement and Test Locations

The measurements were conducted from 31<sup>th</sup> March 2023 to 2<sup>nd</sup> April 2023 at **Admiralty Forest**.

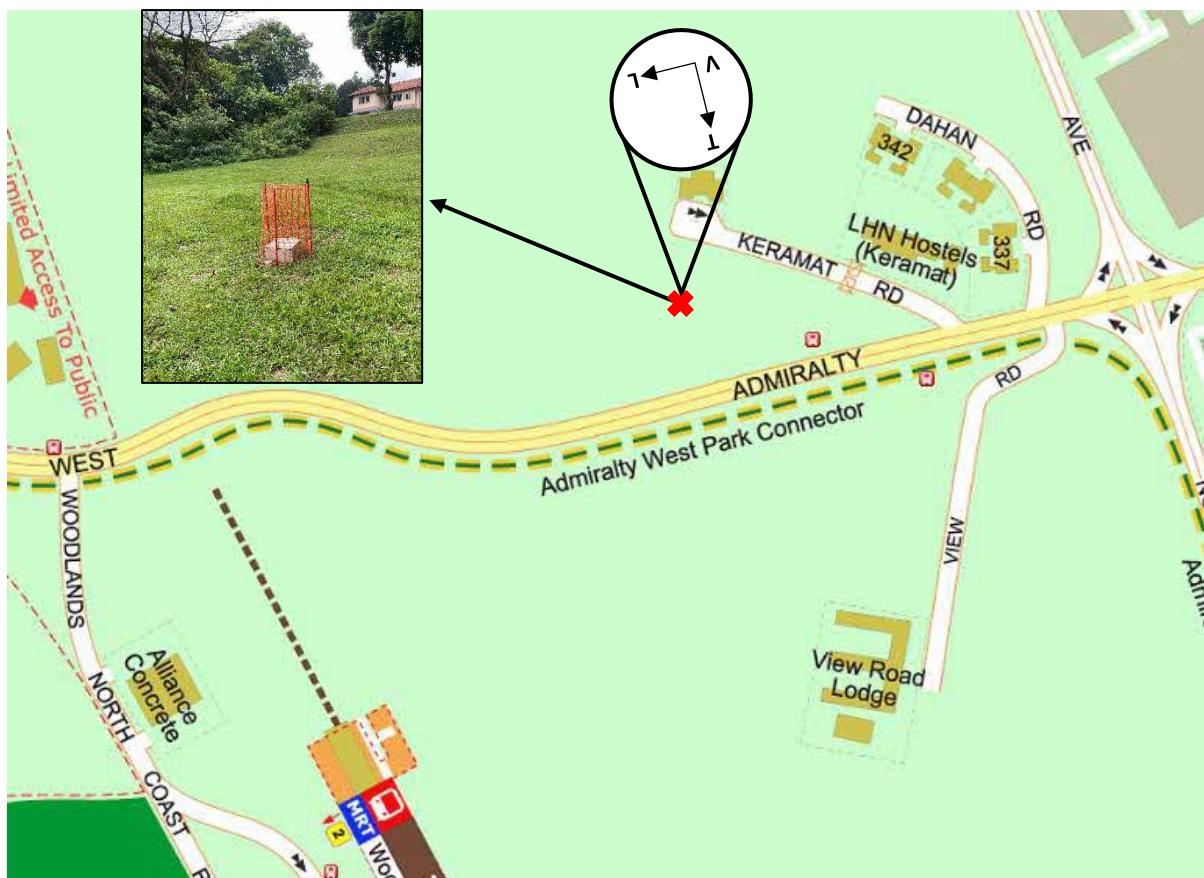

Figure 1: Test Location & Direction of Measurement

## Results & Conclusion

For the results of the measurement, refer to the 'Vibration Measurement Data' section.

The details of the measurement show the frequency with the corresponding peak particle velocity in Vertical, Longitudinal and Transverse direction.

## Introduction

SETSCO SERVICES PTE LTD was appointed by DHI WATER & ENVIRONMENT (S) PTE LTD to carry out Ground Vibration Monitoring at **Republic Polytechnic, 9 Woodlands Ave 9, Singapore 738964.**

## Project

Environmental Baseline Survey

## Scope of Measurement

In this monitoring the evaluation of ground vibration is based on the maximum values of the three components of the vibration velocity that is Vertical, Longitudinal and Transverse direction {V (z-axis), L (x-axis) and T (y-axis)}.

The measurement in this three directions would be monitored at location specified in the 'Date of Measurement and Test Locations' section.

The measurement would be in frequency range of 1Hz to 100Hz, velocity-time domain with a minimum trigger level set at **0.3 mm/s**. The monitoring of vibration was conducted based on client's request. The dominant frequency with the corresponding peak particle velocity would be tabulated. The vibration meter was set on continuous and histogram monitoring with readings taken every 5 seconds interval.

## Objective of Measurement

The objective of this monitoring at **Republic Polytechnic, 9 Woodlands Ave 9, Singapore 738964** was to determine the level of the vibration for the purpose of environmental baseline survey.

## Measurement Equipment Specification

The measurement equipment for the vibration test measurements are as follows:

- INSTANTEL INC Ground Vibration Monitoring Equipment (Vibration Sensor Tri-axial)

Calibration Certification of the equipment/s is provided in 'Appendix 1- Calibration Certificates' section.

## Date of Measurement and Test Locations

The measurements were conducted from 31<sup>th</sup> March 2023 to 2<sup>nd</sup> April 2023 at **Republic Polytechnic, 9 Woodlands Ave 9, Singapore 738964**.

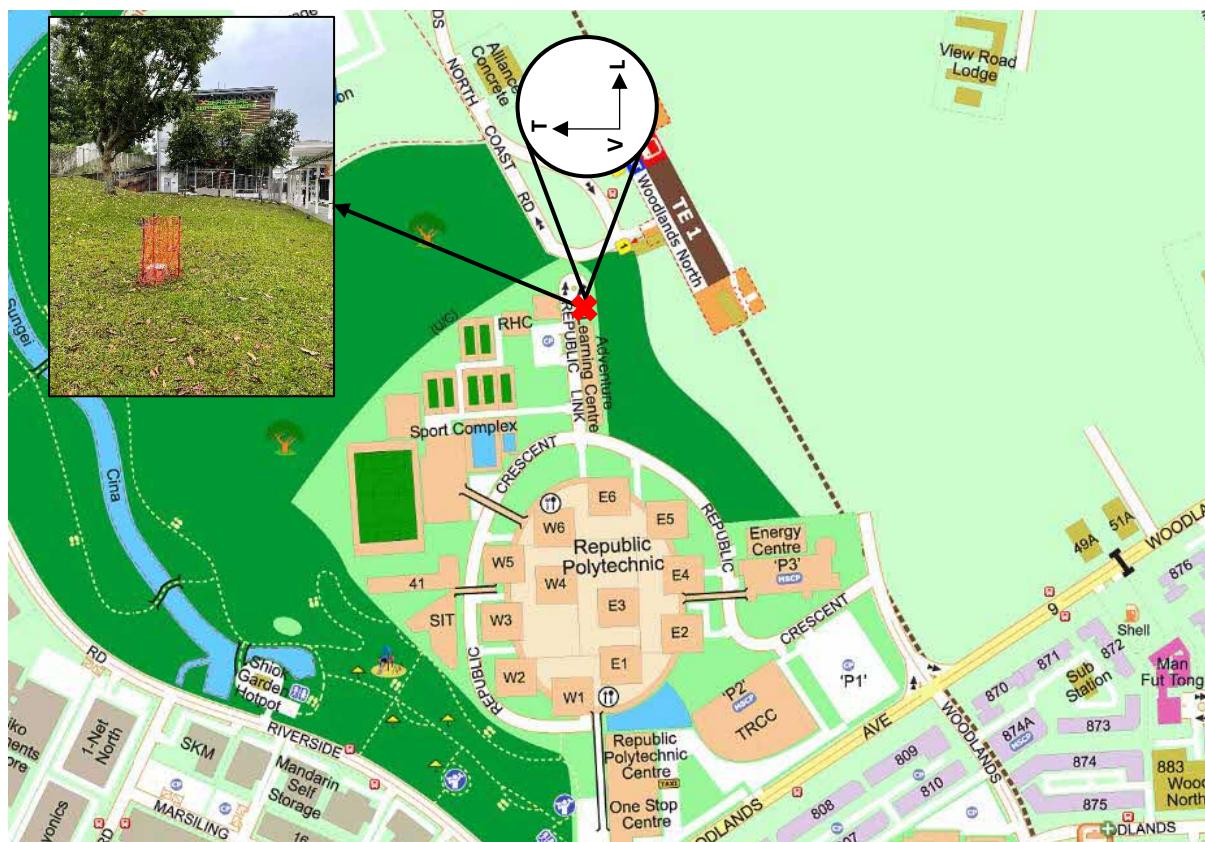

Figure 1: Test Location & Direction of Measurement

## Results & Conclusion

For the results of the measurement, refer to the 'Vibration Measurement Data' section.

The details of the measurement show the frequency with the corresponding peak particle velocity in Vertical, Longitudinal and Transverse direction.

### 3 LAND SURVEY

#### Total Station

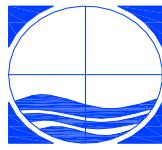

A topographic survey using a total station Leica TS06plus-3 was conducted and covered the site.

#### UAV Drone

An aerial survey was conducted by using a BFD drone mounted with a Riegl miniVUX LiDAR sensor and a Sony A7Rii Camera. (see figure 4)

The drone will be assigned autonomous flight paths to follow in order to acquire smooth and consistent flight data while ensuring complete coverage of the ground within the survey area. The data sets are then downloaded and adjusted by Post Processing Kinematics (PPK) procedures to generate a refined point cloud referenced to SVY21 horizontal datum and reduced to Chart Datum (CD). Point cloud classification algorithms are then performed to extract the ground information which are then verified and checked against existing Ground Control Points (GCPs). The comparison table is shown below:
